Contact: psychopen@leibniz-psychology.org

PsychOpen is the online platform provided by the Leibniz Institute for Psychology Information (ZPID) for publishing scientific contributions in psychology. Specifically, PsychOpen GOLD offers a high-quality publication platform for primary publications in psychology (see [PsychOpen GOLD Publishing Services](#)). PsychOpen GOLD is guided by the following principles:

- **Open Access:** PsychOpen supports free access to scientific literature. All publications in PsychOpen GOLD are accessible free of charge.
- **Open Science:** To promote the understanding and evaluation of psychological research results it is crucial to present the comprehensive research process and its products in an unbiased way. Therefore, for all publications included on the platform, PsychOpen GOLD expects and supports the implementation of open science practices.
- **Community-Based Publishing:** PsychOpen GOLD is a community-driven initiative, focusing on the European research community and its needs. As PsychOpen GOLD is a nonprofit publishing platform generating no revenue and therefore relying on limited resources, strong commitment by its community partners is essential.

All journals and periodicals applying for inclusion in PsychOpen GOLD are reviewed carefully and competitively, both at the time of application and on an ongoing basis (see [PsychOpen GOLD Journal Application Process](#)). Compliance with the PsychOpen GOLD Standards outlined in this document is a basic prerequisite for acceptance and continuous support for journals and periodicals published at PsychOpen GOLD. Particular emphasis is placed on publication standards, which support open, transparent, and replicable psychological research.

1 Open Science Standards

Journal editors agree to the mission of PsychOpen GOLD to foster transparency and reproducibility of research by implementing principles and practices of open science.

- A. Open Access and Open Licensing.** The journal agrees to the principle of open access. Journal content is accessible at no charge, without requiring registration or other access

barriers to users. In addition, the journal does not charge author fees. All content on PsychOpen GOLD are subject to the [Creative Commons License](#) (CC-BY). Thus, authors retain ownership of the copyright for their work, but grant others permission to use it provided that the original work is properly cited.

- B. Open Science Policy.** The journal establishes and implements an open science policy (e.g., the [TOP Guidelines](#)), directing authors, reviewers, and editors in reasonable steps toward more transparency and openness in scientific communication.
- C. Open Data.** Empirical articles have a “data availability statement,” stating whether data are available (and, if so, where they are accessible) and if not, why. In general, publication of data is expected (see F).
- D. Open Scripts, Materials, Measures, Methods, and Workflows.** Authors are requested and guided to share “Supporting Information” like scripts, materials, measures, methods, workflows, and other resources required to replicate their research (see F).
- E. Article Formats Enhancing Openness in Research.** The journal supports article formats enhancing openness and transparency in research, replicability, and early publishing.
 - The journal accepts the submission of Registered Reports (RR). To ensure [protocol transparency](#), accepted Registered Reports (protocols) are registered at ZPID’s repository PsychArchives (see F).
 - The journal accepts the publication of carefully conducted replications as well as meta-analytical approaches to foster cumulative research and research syntheses.
 - The journal supports the publication of preprints (i.e., non peer-reviewed draft versions). Publication of preprints prior to submission is accepted.
- F. Open Science Infrastructure.** To facilitate consistency in standards, the development and improvement of PsychOpen services, and monitoring of open science practices, the journal agrees to use the products and services offered by ZPID to implement open science practices outlined above. “Supporting Information” published with an article (e.g., data, scripts, materials, measures, methods, workflows), study protocols for Registered Reports, etc. are deposited (non-exclusively) at ZPID’s repository [PsychArchives](#). Persistent identifiers (usually DOIs) provided by PsychArchives are used within articles to refer to these resources.

2 General Publishing Standards

Journal editors agree to the mission of PsychOpen GOLD by supporting high quality scholarly communication in psychology and related fields, making original research freely available to the scientific community and the public, achieving high standards in reporting research outcomes, and adhering to best practices in ethical publishing.

- A. Publication Ethics.** The journal implements clear editorial policies for ethical publishing, ensuring fair, unbiased, and swift reviewing, handling possible conflicts of interest (of authors, reviewers, and editors), preventing research misconduct (including fabrication, falsification, or plagiarism), and promoting research transparency (see [Core Practices](#) by the Committee on Publication Ethics [COPE]).
- B. Endorsement by a Scientific Organization.** The journal is endorsed by a national or international academic or professional psychological society.

- C. **International Editorial Board.** The journal is supported by an international editorial board consisting of recognized experts in the field. Affiliations for all editors and editorial board members are published at the journal website.
- D. **Peer-Review Process.** Submissions of research contributions are peer reviewed (open, single-blind, double-blind) by at least two independent external experts in the field (including statistical review where appropriate).
- E. **Reporting Standards.** The journal takes appropriate measures to assure compliance of its publications to established community standards and best-practices in reporting research outcomes, including methodological and statistical standards (e.g., JARS, CONSORT, PRISMA), as well as formal (e.g., APA style), and linguistic (sufficient language level) standards/best-practices. In addition, all published research articles include author contact information, date of submission, acceptance, and publication, and license/copyright information.
- F. **Technological Standards.** The journal implements technological standards (e.g., JATS, OAI) which improve the findability, accessibility, interoperability, and reuse of its contents ([FAIR Principles](#)). This is supported by metadata and abstracts in English for all contributions (regardless of the primary article language).
- G. **Publication Volume.** The journal attracts a constant stream of quality submissions (≥ 30 submissions sent to review/year), resulting in a continuous output of publications (≥ 12 articles/year). Number of submissions and accepted and published articles are published annually.
- H. **Journal impact.** The journal achieves a verifiable impact on the research community, documented by citations in scholarly publications, acceptance by journal indices and quality controlled scholarly databases (e.g., Web of Science, Scopus, PsycINFO, PubMed Central, or research field specific databases), number of submissions, number and (geographic, organizational) diversity of authors, composition of editorial board, etc.

3. Standards Compliance Review

Compliance with PsychOpen standards will be reviewed at the time of application of a new journal project as well as on an ongoing (yearly) basis.

3.1 Initial Review at Journal Application

At application, journal editors have to convincingly demonstrate that the journal is willing and able to fulfill the Standards for PsychOpen GOLD Journals. This is done mainly by carefully working through and answering the [PsychOpen GOLD Journal Application Form](#). In addition, fulfillment of these standards will be part of a formal agreement (*Memorandum of Understanding*), to be signed by the journal editors and ZPID after a journal is accepted for PsychOpen.

3.2 Annual Review

As part of the yearly journal selection process, compliance with the “Standards for PsychOpen GOLD Journals and Periodicals” is reviewed. If a longer-term agreement does not exist for the journal, this review will be included in the yearly decision on renewal of existing agreements and admission of new journals to PsychOpen GOLD.
