Preregistration
(in Psychology)

Lisa Spitzer
(Leibniz Institute for Psychology, ZPID)
Note

- Workshop will be recorded

- Video will be uploaded after our workshop
  - I will share the link via Twitter
About me

- Lisa Spitzer, M.Sc. (Psychology)
- PhD Student at the Leibniz Institute for Psychology (ZPID) in Germany
- Meta-scientific PhD Topic: Assessing and Increasing the Reproducibility of Psychological Research throughout the Research Cycle
- Open science enthusiast!

✉️ ls@leibniz-psychology.org
🐦 @lspitzer95
About the ZPID
~ Leibniz Institute for Psychology

- Public Open Science Institute for Psychology
- Offers services that support (psychological) researchers in all steps of the research cycle
And you?
Regarding preregistration, would you say you are ...
What research area do you work in?

1. Start presenting to display the poll results on this slide.
What do you associate with preregistration?

1. Start presenting to display the poll results on this slide.
Overall information

- Ask lots of questions!

- [Google Doc](#) including all important links
- Slides are available at PsychArchives
Today’s schedule

Part I
Introduction

- What is a preregistration?
- Why is it important to preregister?
- Why should YOU preregister?

Part II
The preregistration process

- Templates
- Formats
- Platforms
Part I: Introduction
What is a preregistration?

Working definition:

A preregistration is a **study plan** that is **registered with an independent party** (e.g., a repository) **before the data has been collected or examined**. Upon registration, a **time-stamped** record of the study plan is created that will eventually be **published (possibly after an embargo period)**. If the study plan changes afterwards, either a new record needs to be created or the deviations will be apparent when comparing the preregistration to the final manuscript. Thus, preregistration allows a **transparent presentation of what was planned at a certain time point and what changes may have been made to a study till its publication**.
Why is it important to preregister?

Credibility crisis

OSC (2015)
Questionable research practices (QRPs)

Munafò et al. (2017)
Credibility revolution

Open science

Preregistration of studies
Adoption of preregistration in psychology

Christensen et al. (2019)

Hardwicke et al. (2020)
Why should YOU preregister?

- Increases transparency
- Decreases QRPs
- Allows for a clear differentiation of confirmatory and exploratory analyses
- Can serve as a plan to adhere to during study administration
- Helps gather feedback by others and supports collaboration

Good scientific practice
Potential obstacles ...?

- No flexibility (e.g., exploratory analyses)
- Scooping
- Time and effort
- Cannot prevent some QRPs
- Does not fit all research types
Questions & Break
Part II: The preregistration process
How to create a preregistration?

A lot of options!

Templates  Formats  Platforms
Step I: Templates
Templates

- Registered Report Protocol Preregistration
- van ’t Veer and Giner-Sorolla (2016)
- Replication recipe (Brandt et al., 2013)
- AsPredicted
- OSF-Standard Pre-Data Collection Registration
- COS Preregistration Challenge Template (OSF)
- ...
- NEW: Preregistration for Quantitative Research in Psychology Template
Available on osF.o as an online pre-registration form that includes time stamping.

<table>
<thead>
<tr>
<th>Section</th>
<th>Essential elements</th>
<th>Recommended elements</th>
</tr>
</thead>
</table>
| A. Hypotheses | 1. Describe the (numbered) hypotheses in terms of relationships between your variables.  
2. For interaction effects, describe the expected shape of the interactions.  
3. If you are manipulating a variable, make predictions for successful check variables or explain why no manipulation check is included. | 4. A figure or table may be helpful to describe complex interactions.  
5. For original research, add rationales or theoretical frameworks for why a certain hypothesis is tested.  
6. If multiple predictions can be made for the same IV-IV combination, describe what outcome would be predicted by which theory. |
| B. Method | Design |  
List, based on your hypotheses from section A:  
1. Independent variables and all their levels  
a. whether they are within- or between-participants;  
b. the relationship between them (e.g., orthogonal, nested).  
2. Dependent variables.  
3. Third variables acting as covariates or moderators. |  
Planned sample | 4. If applicable, describe pre-selection rules.  
5. Indicate where, from whom and how the data will be collected.  
7. Describe data collection termination rule. |  
Exclusion criteria | 8. Describe anticipated data exclusion criteria.  
Some examples of exclusion criteria are:  
a. missing, erroneous, or overly consistent responses;  
b. failing check-tests or suspicion probes;  
c. demographic exclusions;  
d. data-based outlier criteria;  
e. method-based outlier criteria (e.g., too short or long response times). | 9. Set fail-safe levels of exclusion at which the whole study needs to be stopped, altered, and restarted. |
| Procedure | 10. Describe all manipulations, measures, materials and procedures including the order of presentation and the method of randomization and blinding (e.g., single or double blind), as in a published Methods section. |  
C. Analysis plan | Confirmatory analyses | Specify contingencies and assumptions, such as:  
6. method of correction for multiple tests;  
7. the method of missing data handling (e.g., pairwise or listwise deletion, imputation, interpolation);  
8. reliability criteria for item inclusion in scale;  
9. anticipated data transformations;  
10. assumptions of analyses and plans for alternative/corrected analyses if each assumption is violated. |
1) Data collection. Have any data been collected for this study already?
   - Yes, we already collected the data.
   - No, no data have been collected for this study yet.
   - It's complicated. We have already collected some data but explain in Question 8 why readers may consider this a valid pre-registration nevertheless. (Note: "Yes" is not an accepted answer.)

2) Hypothesis. What's the main question being asked or hypothesis being tested in this study?
   Example: A month-long academic summer program for disadvantaged kids will reduce the drop in academic performance that occurs during the summer.

3) Dependent variable. Describe the key dependent variable(s) specifying how they will be measured.
   Example: Simple average GPA across all courses during the first semester after the intervention.

4) Conditions. How many and which conditions will participants be assigned to?
   Example 1: Two conditions: Offering summer program: yes vs no.
   Example 2: 12 conditions in a mixed design lab study. Participants will be assigned to one of four conditions: math training, verbal training, memory task, or control (4 between-subject conditions). Each participant will complete a math test, a verbal test, and a memory test (3 within-subject conditions).

5) Analyses. Specify exactly which analyses you will conduct to examine the main question/hypothesis.
   Example: Linear regression predicting the simple average GPA in the semester after the intervention with a dummy variable indicating whether the participant was offered the summer program or not (intention-to-treat analysis). We will also conduct the same regression controlling for simple average GPA during the semester before the intervention, gender, & household income (an 8-point scale ranging from 1 = below $20,000 and 8 = above $150,000).
6) Outliers and Exclusions. Describe exactly how outliers will be defined and handled, and your precise rule(s) for excluding observations.

Example 1: We will compute the overall mean and standard deviation across all conditions, and winsorize at 2.5 SD above/below the mean. Example 2: We will exclude participants who incorrectly answer at least 2 of our 3 attention check questions. Example 3: We will exclude any participants who complete the survey in less than 30 seconds.

7) Sample Size. How many observations will be collected or what will determine sample size? No need to justify decision, but be precise about exactly how the number will be determined.

Example: We will offer the program until 500 people have agreed to participate in it or until June 30, 2016 (whichever comes first).

8) Other. Anything else you would like to pre-register?
(e.g., secondary analyses, variables collected for exploratory purposes, unusual analyses planned?)

Example: We will include a battery of questions for exploratory purposes, including life satisfaction, amount of videogame playing, and family activity. We will also provide an additional survey with 24 questions assessing achievement orientation. We will not report the results of those analyses for the project being pre-registered.
NOTE: If you leave this blank it will read "Nothing else to pre-register."

9) Name. Give a title for this AsPredicted pre-registration
Suggestion: use the name of the project, followed by study description.

Example: SUMMER PROGRAMS - GPA performance, Chicago, July 2018

Finally. For record keeping purposes, please tell us the type of study you are pre-registering.

- Class project or assignment
- Experiment
- Survey
- Observational/archival study
- Other
Preregistration for Quantitative Research in Psychology Template

Preregistration Standards for Psychology
A collaborative effort between the American Psychological Association, British Psychological Society, and German Psychological Society

In partnership with the Leibniz Institute for Psychology and Center for Open Science

Preregistration for Quantitative Research in Psychology Template

- T Title and Title Page
- A Abstract
- I Introduction
- M Method
- AP Analysis Plan
- O Other Information (optional)
Templates: Resumé

- A lot of templates are available
- Many similarities
- Differences: e.g., focus on specific research situations (e.g. replications) ↔ universality
- Which one to choose?
Exercise

• Take a look at some of the templates that sound interesting to you

**Optional Code availability:**

[link to code availability] (data download, site).
Preregistration for Quantitative Research in Psychology Template

Not all of the following are relevant for every study; registries will make fields required or not as relevant.

Title

T1 Title

The title should be focused and descriptive, using relevant key terms to reflect what will be done in the study. Use title case (https://apastyle.apa.org/style-grammar-guidelines/capitalization/title-case)

T2 Contributors, Affiliations, and Persistent IDs (recommend ORCID ID)

Provide in separate entries the full name of each contributor, each contributor's professional affiliation, and each contributor's persistent ID. See ORCID ID for an example of persistent ID (https://orcid.org). Optional: include the intended contribution of each person listed (e.g., statistical analysis, data collection; see CRedit, https://casrai.org/credit)
Google Form
Jupyter Notebook
R Markdown

---

# Title and title page

<<- The title should be focused and descriptive, using relevant key terms to reflect what will be done in the study. Use title case. (Hyperlink: https://apastyle.apa.org/style-grammar-guidelines/capitalization/title-case) -->

Enter your response here.

## T2

<<- Provide in separate entries the full name of each contributor, each contributor’s professional affiliation, and each contributor’s persistent ID. See ORCID ID for an example of persistent ID. (Hyperlink: https://orcid.org/). Optional: include the intended contribution of each person listed (e.g. statistical analysis, data collection; see CRediT, hyperlink: https://casrai.org/credit/). -->

Enter your response here.

um zu erfahren, wie R oder R packages in Publikationen zitiert werden können.

Tippen Sie ’demo()’ für einige Demos, ’help()’ für on-line Hilfe, oder ’help.start()’ für eine HTML Browserschnittstelle zur Hilfe. Tippen Sie ’q()’, um R zu verlassen.
One possible route to create preregistrations: R Markdown
What is R?

- Programming language
- Free of charge and open source
- Focus on data
  - Processing
  - Analysis
  - Visualization
- [https://www.r-project.org/](https://www.r-project.org/)
Working with R

- R is based on analysis scripts/code

  → Analysis scripts
    - Complete analysis protocol
    - Can be distributed and published
    - Reproducible
RStudio

- R can be used with various software, one of which is RStudio
- Provides an interface to work with R
- [https://www.rstudio.com/](https://www.rstudio.com/)
R Markdown

- Interactive document format
- Includes chunks of embedded R code
  - Lets you combine data analysis and reporting
- R Markdown documents can be knitted to:
  - HTML
  - PDF
  - Word

Your data tells a story. Tell it with R Markdown.
Turn your analyses into high quality documents, reports, presentations and dashboards.
https://rmarkdown.rstudio.com/
prereg {prereg}

- Provides R Markdown templates to preregister scientific (psychological) studies
- Available templates:
  - AsPredicted
  - Replication recipe (Brandt et al., 2013)
  - van 't Veer and Giner-Sorolla (2016)
  - Registered Report Protocol Preregistration
  - COS Preregistration Challenge
  - Preregistration for Quantitative Research in Psychology Template
Using R Markdown to create preregistrations

Writing manuscripts in R Markdown
- Possibility to combine data analyses and reporting
- Highly reproducible

Writing preregistrations in R Markdown
- Same format for the whole project
- Nicely formatted (e.g., in PDF)
- References can be included automatically
Preregistrations with R Markdown

Walkthrough
**Exercise**

- Try creating your very own preregistration using R Markdown and the `prereg` package
- Use the Preregistration for Quantitative Research in Psychology Template or any other template you want

~ 20 minutes
Questions & Break
Step III: Platforms
Overview over platforms

- PreReg: https://prereg-psych.org/
- OSF: https://osf.io/prereg/
- ASPredicted: https://aspredicted.org/
Platforms:
PreReg in Psychology

- Repository Track
  - Archived in PsychArchives
  - Timestamped
  - Assigned a DOI

- Lab Track
  - Protocol is reviewed by external reviewers
  - Successful applications are awarded a free-of-charge data collection by ZPID’s service PsychLab (online or offline)
Submission via PreReg

Walkthrough
You can then easily submit the preregistration on PreReg (demo)
Links

- ZPID: leibniz-psychology.org

- Preregistration for Quantitative Research in Psychology Template:
  - Google Spreadsheet
  - Google Doc
  - Google Form
  - Jupyter Notebook
  - Webcast

- PreReg in Psychology: prereq-psych.org

- Slides are available on PsychArchives
And a little advertising ...

- The conference is devoted to
  - research addressing methods and applications of research syntheses (including systematic reviews and meta-analyses)
  - Big Data analyses (including large data sets, intensive longitudinal data, and machine learning)
    ~ in psychology and related fields
- Deadline for submitting abstracts: December 31, 2020
- More information is available here
Thank you!

Do you have any questions?
